

How to Fix XML Problem on Spring

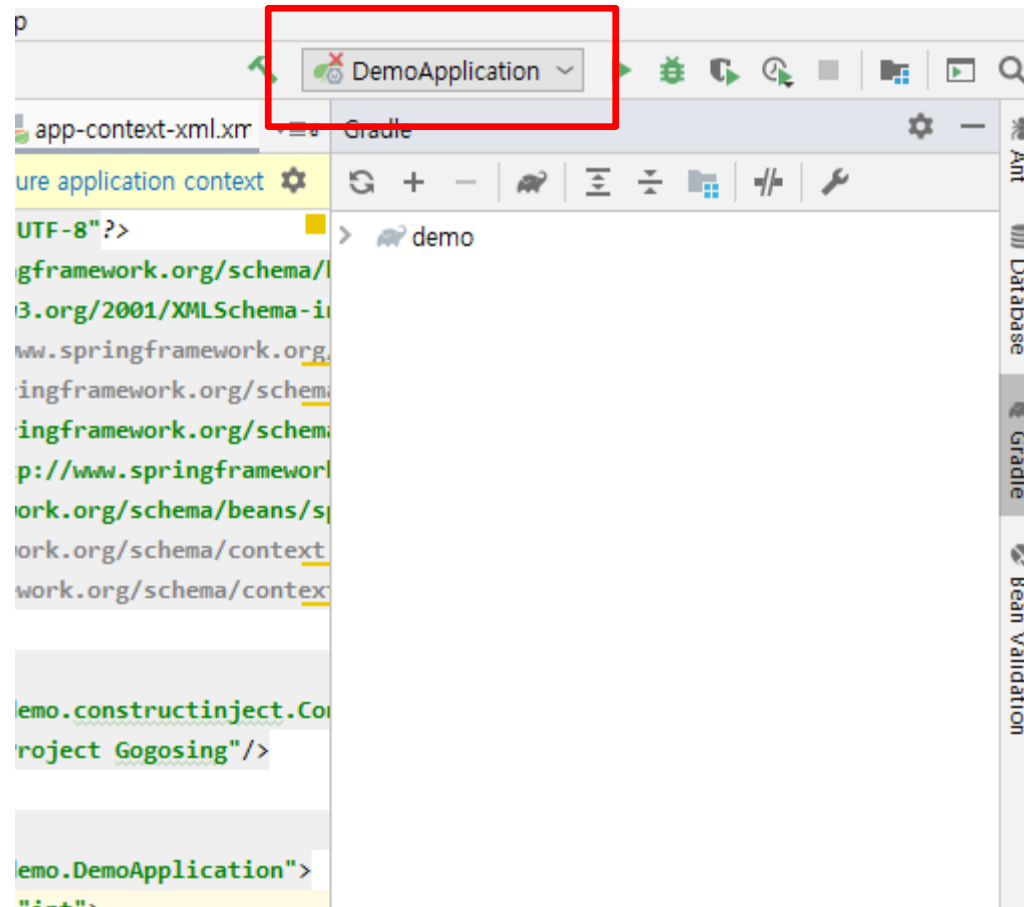

Innova Lee(이상훈)
gcccompil3r@gmail.com

우선 필요한 코드를 모두 작성 완료한다.

Edit configuration

Name: DemoApplication

☐ Share through VCS ? ☐ Allow parallel run

Configuration

Code Coverage

Logs

Main class: com.example.demo.DemoApplication

Environment

VM options:

Program arguments:

Working directory:

Environment variables:

Use classpath of module: demo_main

☒ Include dependencies with "Provided" scope

JRE: Default (11 - SDK of 'demo_main' module)

Shorten command line: user-local default: none - java [options] classname [args]

Spring Boot

☐ Enable debug output ☐ Hide banner ☒ Enable launch optimization ☒ Enable JMX agent

Running Application Update Policies

On 'Update' action: Do nothing ?

On frame deactivation: Do nothing ?

Active profiles:

Override parameters:

Name	Value	
		+

?

Run

Cancel

Apply

test
itignore
uild.gradle
mo.iml
adlew
adlew.bat
ELP.md

37 //SpringApplication.run()
38 }
39 }
40

DemoApplication > main()

Run: DemoApplication x

Console Endpoints

01:01:55.701 [main] DEBUG org.springframework.beans.factory.support: DemoApplication(int) Called
01:01:55.711 [main] DEBUG org.springframework.core.env.PropertySource: Number: 77
